

One of the reasons I purchased XM radio and subscribed to their service is the instant traffic and weather. To remove this programing would be a great disservice to those that made the purchase in part based on the availability of this programing. I am a strong supporter of Sattelitelte supplied news and weather. Just as the weather channel provides sattelite televised weather while I am at home, the indepth traffic and weather while I am in my vehicle is when I need it most. The traffic specifically is very important and allows me to know specific troublespots when I need to be at a location. I must please ask that the Sattelitelte features under attack be left alone. Thank you,
Dennis Painter
